**SUBJECT:** BIOLOGY,

## **CONTENT**

### **ECOLOGICAL SUCCESSION**

This is the gradual and orderly change of species in a community over time.

There are two types of ecological succession;

primary succession

secondary succession

Primary succession occurs in a barren unoccupied area.

Secondary succession takes place in an existing community that has been subjected to some form of disturbance such as; fires, floods, storms v , volcanic eruption as well as human activities.

### **OVERCROWDING**

This occur when the size of a population increase to a point the resource in the environment are unable to support all the members in the population

Factors affecting population size

birth rate

death rate

migration

effect of overcrowding

food shortage

inadequate space for breeding and shelter

increased competition

### **Assignment**

What method of family planning are available in Nigeria, mention three of them.
